

AI Malware Investigation Report

File: fdm_x64_setup.exe

SHA256: 167012f1720f5450588ac4c29db3799427498663fcba21a6ed64bf15ed4d2c5f

Size: 48165568 bytes (45.93 MB)

Date: 2026-06-11

Verdict: Benign

Risk Level: Low

1. Executive Summary

The submitted file, 'fdm_x64_setup.exe', has undergone static ML analysis. The analysis indicates a 'Benign' verdict with a high confidence score of 97%. The file exhibits a very low malware probability and is assessed with a low risk level. No malicious indicators were identified by the ML model.

2. Detection Summary

The ML static analysis model returned a 'Benign' verdict for the file. Based on this assessment, the final decision is to classify the file as Benign.

3. Final Verdict

Benign

4. Malware Classification

Analysis unavailable

5. Confidence Assessment

The ML model assessed this file with a high confidence score of 97%, indicating a strong likelihood of its benign nature based on the analyzed static features.

6. Technical Findings

Analysis unavailable. No specific PE structure insights, imports, sections, or entropy indicators were provided by the ML static analysis.

7. Indicators of Compromise

- Hash (SHA256): 167012f1720f5450588ac4c29db3799427498663fcba21a6ed64bf15ed4d2c5f
- Filename: fdm_x64_setup.exe

8. Risk Assessment

Risk Score: 3

Risk Level: Low

Justification: The ML analysis assigned a low risk score of 3, with a low malware probability of 3.49%. This indicates the file is likely benign based on its static features and poses minimal threat.

9. Potential Impact

Given the 'Benign' verdict and low risk assessment, the potential impact is minimal, assuming the file's origin is trusted and its integrity is verified.

10. Recommended Actions

- Verify the source and integrity of the file if not already trusted.
- Monitor system behavior if the file is executed, as a precautionary measure.
- No immediate containment or mitigation steps are required based on current analysis.

11. Analyst Conclusion

The file 'fdm_x64_setup.exe' has been classified as Benign by the ML static analysis with high confidence and a low risk score. No evidence of malicious activity was detected. It is recommended to proceed with caution by verifying the file's source before execution.
